

CLAIMS

What is claimed is:

1. A method of dynamically at least one
5 of allocating, upgrading and awarding admittance
to events to an event customer via a data
communication network, said data communication
network optionally comprising a server,
workstations operably connectable to said server,
10 one or more databases operably connectable to
said server and said workstations, said
workstations optionally including a web browser
interface facilitating communication with said
server, a point of sale server operably
15 connectable to the server, a point of sale system
operably connectable to the point of sale server,
and wireless devices operably connectable to said
server, said wireless devices including at least
one of a smart card, a personal digital
20 assistant, a mobile telephones, and a mobile data
device, said wireless device comprising at least
one of transmitting and receiving means and
transceiver means for receiving and transmitting
signals, said method comprising the at least one
25 of the sequential, non-sequential and sequence
independent steps of:

5 (a) receiving a communication from the event customer, the communication including a request to obtain admittance to at least one event, the communication also including an identifier associated with an identification device;

(b) updating an account associated with said identifier to reflect the request;

10 (c) at least one of accessing and verifying the account by utilizing the identifier stored on the identification device at the point of sale system upon presentation of the identification device to verify the request;

15 (d) admitting the event customer at the point of sale system after verification of the request;

20 (e) determining an available allocation associated with the event and notifying at least one of the event customers that are at least one of currently attending the event, and registered for at least one of allocating, provisioning, upgrading and awarding responsive to said determining the available allocation;

25 (f) accepting by at least one of the event customers said at least one of allocating,

provisioning, upgrading and awarding in
accordance with predetermined criteria;

(g) billing the at least one of the event
customers in at least one of real-time or at a
5 later time for said at least one of allocating,
provisioning, upgrading and awarding in
accordance with the second predetermined
criteria; and

(h) paying by the at least one of the
10 event customers responsive to said billing step
(g),

wherein said receiving, updating,
accessing, verifying, admitting, determining,
accepting, billing and paying steps further
15 include equivalent steps thereof.

2. The method of claim 1, wherein the
communication includes at least one of payment
information, an event selection, a venue
20 selection, a concession selection, and a
merchandise selection.

3. The method of claim 1, wherein said
identification device comprises a memory medium
25 for storing the identifier, and wherein said
accessing step further comprises reading said

identifier from said identification device with a reading device.

5 4. The method of claim 1, wherein the account is stored in at least one of the server, the identification device, and the point of sale server.

 5. The method of claim 1, wherein the account includes a list of purchased items.

10 6. The method of claim 1, wherein the request comprises at least one of a movie ticket, a sporting event ticket, a concession, or merchandise.

 7. The method of claim 1, further
15 comprising receiving demographic information from the event customer.

 8. The method of claim 1, further
comprising generating at least one of a physical receipt, a confirmation, and an electronic
20 confirmation with at least one of the identification device and the point of sale server.

9. The method of claim 1, further comprising the step of generating at least one of a physical receipt, a confirmation, and an electronic confirmation with at least one of the
5 identification device and the point of sale server, and the at least one of the physical receipt, the confirmation, and the electronic confirmation comprises at least one of reserved seating and purchase information.

10 10. A method of dynamically at least one of allocating, upgrading and awarding admittance to events to an event customer via a data communication network, said data communication network optionally comprising a server,
15 workstations operably connectable to said server, one or more databases operably connectable to said server and said workstations, said workstations optionally including a web browser interface facilitating communication with said
20 server, a point of sale server operably connectable to the server, a point of sale system operably connectable to the point of sale server, and wireless devices operably connectable to said server, said wireless devices including at least
25 one of a smart card, a personal digital assistant, a mobile telephones, and a mobile data

device, said wireless device comprising at least one of transmitting and receiving means and transceiver means for receiving and transmitting signals, said method comprising the at least one
5 of the sequential, non-sequential and sequence independent steps of:

(a) receiving a communication from the event customer, the communication including a request for at least one of a movie ticket, a
10 sporting event ticket, a concession, or merchandise to obtain admittance to at least one event, the communication also including an identifier associated with an identification device, and said receiving step further including
15 equivalents thereof;

(b) updating an account associated with said identifier to reflect the request;

(c) at least one of accessing and verifying the account by utilizing the identifier
20 stored on the identification device at the point of sale system upon presentation of the identification device to verify the request;

(d) admitting the event customer at the point of sale system after verification of the
25 request;

(e) determining an available allocation associated with the event and notifying at least one of the event customers that are at least one of currently attending the event, and registered
5 for at least one of allocating, provisioning, upgrading and awarding responsive to said determining the available allocation; and

(f) accepting by at least one of the event customers said at least one of allocating,
10 provisioning, upgrading and awarding in accordance with predetermined criteria.

11. A system of dynamically at least one of allocating, upgrading and awarding admittance
15 to events to an event customer via a data communication network, said data communication network optionally comprising a server, workstations operably connectable to said server, one or more databases operably connectable to
20 said server and said workstations, said workstations optionally including a web browser interface facilitating communication with said server, a point of sale server operably connectable to the server, a point of sale system
25 operably connectable to the point of sale server, and wireless devices operably connectable to said

server, said wireless devices including at least one of a smart card, a personal digital assistant, a mobile telephones, and a mobile data device, said wireless device comprising at least
5 one of transmitting and receiving means and transceiver means for receiving and transmitting signals, said system comprising:

(a) means for receiving a communication from the event customer, the communication
10 including a request for at least one of a movie ticket, a sporting event ticket, a concession, or merchandise to obtain admittance to at least one event, the communication also including an identifier associated with an identification
15 device, and said means for receiving step further including equivalents thereof;

(b) means for updating an account associated with said identifier to reflect the request;

20 (c) means for at least one of accessing and verifying the account by utilizing the identifier stored on the identification device at the point of sale system upon presentation of the identification device to verify the request;

(d) means for admitting the event customer at the point of sale system after verification of the request;

5 (e) means for determining an available allocation associated with the event and notifying at least one of the event customers that are at least one of currently attending the event, and registered for at least one of allocating, provisioning, upgrading and awarding
10 responsive to said determining the available allocation; and

(f) means for accepting by at least one of the event customers said at least one of allocating, provisioning, upgrading and awarding
15 in accordance with predetermined criteria.

12. A system to upgrade and award admittance to events to an event customer, said system comprising:

20 a server comprising a processor and a memory medium, said server connected to a data communication network, said memory medium containing instructions for controlling said processor, wherein said processor receives a
25 communication from the event customer, the communication including a request to obtain

admittance to at least one event, the communication also including an identifier associated with the event customer, updates a database indicating that the request was
5 processed, determines first predetermined criteria associated with the event indicative of at least one other event customer not attending the event, releases an allocation associated with the at least one other event customer responsive
10 to said determining step, and notifies at least another of the event customers to at least one of upgrade and award the at least another of the event customers with the allocation; and

15 a plurality of wireless devices operably connectable to said server, said wireless devices including at least one of a smart card, a personal digital assistant, a mobile telephone, and a mobile data device, said wireless device
20 comprising at least one of transmitting and receiving means and transceiver means for receiving and transmitting signals to and from said server, including accepting by the at least another of the event customers said at least one
25 of the upgrade and award for the reallocation via at least one of said wireless devices.
